1 Introduction

The Bufr reference Manual is compiled to accompany Bufr User's Guide Manual. It describes the latest Bufr Tables and ECMWF observation types and subtypes. For each subtype there is a template describing the observation.

2 BUFR Tables

2.1 Bufr Table A

This table contains Bufr categories which shall be packed in the 9th byte of the Section 1.

Code figure	Meaning
0	Surface data - land
1	Surface data - sea
2	Vertical soundings (other than satellite)
3	Vertical soundings (satellite)
4	Single level upper-air data (other than satellite)
5	Single level upper-air data (satellite)
6	Radar data
7	Synoptic features
8	Physical/chemical constituents
9	Dispersal and transport
10	Radiological data
11	Bufr tables, complete replacement or update
12	Surface data (satellite)
13 - 19	Reserved
20	Status information
21	Radiance (satellite measured)
22 - 30	Reserved
31	Oceanographic data
32 - 100	Reserved
101	Image data
102 - 239	Reserved
240 - 254	For experimental use
255	Indicator for local use, with sub-category

2.2 Bufr Table B

The latest Bufr Table B version is 13

2.2 Bufr Table B

${\bf 2.3}\quad Bufr\ Table\ C\ \hbox{-}\ Data\ description\ operators}$

Table refence F X	Operand	Operator name	Operation definition
2 01	Y	Change data width	Add (Y-128) bits to the data width given for each data element in Table B, other than CCITT IA5 (character) data, code or flag tables
2 02	Y	Change scale	Multiply scale given for each non-code data element in Table B by 10**(Y-128)
2 03	Y	Change reference value	Subsequent element descriptors define new reference values for corresponding Table B entries. Each new reference value is represented by Y bits in Data section. Definition of new reference values is concluded by coding this operator with Y=255. Negative reference values shell be represented by positive integer with left-most bit (bit 1) set to 1.
2 04	Y	Add associated field	Precede each data element with Y bits of information. This operation associates a data field (e.g. quality control information) of Y bits with each data element.
2 05	Y	Signify character	Y characters (CCITT IA5) are inserted as a data field of Yx8 bits in length
2 06	Y	Signify data width for the immediately following local de- scriptors	Y bits of data are described by the immediately following descriptors
2 07	Y	Increase scale, reference value and data width	For Table B elements that are not CCITTIA5 data, code or flag tables: 1) Add Y bits to the existing scale 2) muliply the existing reference value by 10**Y 3) Calculate ((10*Y)+2)/3, disregard any fractional remainder and add the result to the existing data width

2 08	Y	Change width of CCITTIA5 field	Y characters from CCITTIA5 (representing Y*8 bits in length) replace the specified data width given for each CCITTIA5 element in table B. Note that maximum value for Y is 255.
2 09	Y	IEEE floating point representation	For elements in Table B other than CCITTIA5, Code Tables, Flag Tables and delayed replication factors, this operator shall indicate that values are represented in YYY bit IEEE floating point, where YYY can be set to 032 (single precision) or 064 (double precision). This Operator shall override the scaling, reference value and data width from Table B. An operand of YYY=000 shall reinstate the table B scaling, reference value and data width.
2 21	Y	Data not present	Data values present in Section 4 corresponding to the following Y descriptors shall be limited to data from Class 1-9, Class 31, and data needed for replication expansion.
2 41	000	Define event	This operator denotes the begining of the definition of an event
2 41	255	Cancel define event	This operator denotes the conclusion of the event definition that was begun via the previous 241000 operator
2 42	000	Define condition- ing event	This operator denotes the begining of the definition of a conditioning event
2 42	255	Cancel define conditioning event	This operator denotes the conclusion of the conditioning event definition that was begun via previous 242000 oper- ator
2 43	000	Categorical fore- cast values follow	The values which follow are categorical forecast values
2 43	255	Cancel categorical forecast values follow	This operator denotes the conclusion of the defintion of categorical forecast values that was begun via the previous 243000 operator
